

DO I NEED THIS SOFTWARE?

You need this application if you want to:

- Process hail insurance with ease
- Ensure accurate premium calculations
- Access a number of useful reports
- Post directly to the tax ledger from hail

WHAT WILL THIS APPLICATION DO FOR ME?

MuniSoft's Hail program is designed to assist municipalities with hail insurance processing for Saskatchewan Municipal Hail Insurance (SMHI). With a simple interface that syncs with the tax program, you can enter crop reports and charge hail levies with ease.

WHAT CAN I LOOK FORWARD TO WHEN USING THIS PROGRAM?

Efficient Functionality

- You can easily enter all crop report information from one point of entry
- You will levy for hail and the system will automatically apply the charges to the tax roll
- You can select the "Hail Only Property" option to send the tax notice to the insured customer rather than the property owner
- You will appreciate the ability to set up multiple basic rates; especially if you belong to a large municipality with multiple townships or ranges

Speedy Data Entry:

- You will streamline data entry by utilizing drop-lists and setting defaults to the most commonly used option
- You will save time and effort by automating township information, using the shared database in your MuniSoft Tax program
- You will quickly answer enquiries about premium calculations using the Insured Crops browse

Helpful Reports:

- You will access the hail report to provide SMHI hail information in a suitable format
- You will use the Hail Roll Verification report to check that customers meet all legal requirements
- You will ensure the crop report deadline is met by using the Missing Crop Report to track missing reports and remind customers to turn them in
