

DO I NEED THIS SOFTWARE?

You need this application if you want to:

- Work on the go
- Increase the efficiency and productivity of your Public Works department
- Save valuable time and paper
- Have full visibility of your Public Works department's efforts

WHAT WILL THIS APPLICATION DO FOR ME?

PubWorks Mobile is designed to seamlessly interact, securely and in real-time, with your main PubWorks database, allowing in office updates to reach onsite workers and crews automatically and instantly and vice-versa.

WHAT CAN I LOOK FORWARD TO WHEN USING THIS PROGRAM?

Increased Productivity:

- You and your crew members will like the easy-to-use functionality; after a couple quick clicks, the work is logged in the database
- You will reduce the number of trips between the office and field for your field workers
- You will improve communication between the office and the field
- You will have the ability to work offline, if need be. No expensive per-device data plan required!

Less Paperwork:

- You can perform inspections in the field and log the information immediately, instead of writing it on paper and recording it later
- Your field workers will appreciate that they no longer need to fill out and send in paper time sheets, instead they can enter their work as they go
- You will never lose a work order or to-do list; once entered, the information will be saved in the system and accessible for everyone

Comprehensive Asset Inventory:

- You can update any asset with new attribute information right from the field
- You can add photos while onsite for office workers to view instantly

Compatible with Other PubWorks Modules:

- If you have the Service Requests module, you can send new requests to your field workers; the requests will appear as work orders on their devices

PubWorks Standard is required. The Service Requests module is highly recommended. For more information, email us at clientcare@munisoft.ca or call us at 1-800-663-6864.
